Unil-6
1) Benefits of object oriented development over structural
2) Benefits of object oriented development over structural
UNIT-1
1) Information System and its types.
2) DAG T.
3 CASE Tools.
1) Protohyping and Agrile development approach. 5) Project management and 9tis phases. 6) Why do we need information system?
moject management and Its phases.
6) Why do we need Information system!
ONIT-2
1) Process of Identifying and selecting IS development projects 2) Types of Project feasibility. 3) Assessing Project feasibility.
2) ypes of Project feasibility.
Assessing Project feasibility.
4) Break-even analysis (Numbrical):
UNIT-3
1) JAD and It's advantages
1) JAD and It's advantages. 2) Drawing DFDis
1) JAD and 1ts advantages. 2) Drawing DFDis 3) Modeling logic [with decision tables of decision tables]
1) JAD and 9tis advantages. 2) Drawing DFDis 3) Modeling logic [with decision tables of decision frees] 4) Data modeling VS. Process modeling they do you use.
1) JAD and 9tis advantages. 2) Drawing DFDis 3) Modeling logic [with decision tables of decision frees] 4) Data modeling VS. Process modeling they do you use.
1) JAD and 1ts advantages. 2) Drawing DFDis 3) Modeling logic [with decision tables of decision tables]
1) JAD and 9tis advantages. 2) Drawing DFDis 3) Modeling logic [with decision tables of decision frees] 4) Data modeling VS. Process modeling they do you use.
Drawing DFDis Modeling logic [with decision tables of decision frees] Data modeling vs. Process modeling. How do you use entity—relationship model for data modeling? UNIT-4
JAD and Itis advantages. 2) Drawing DFDis Z Modeling logic [with decision tables of decision trees] 4) Data modeling VS, Process modeling, How do you use entity—relationship model for data modeling? UNIT-4 2) Normalization (Basic concept with example for 5 marks).
1) JAD and Itis advantages. 2) Drawing DFDis 3) Modeling logic [with decision tables of decision trees] 4) Data modeling VS. Process modeling. How do you use entity—relationship model for data modeling? UNIT-4 2) Normalization (Basic concept with example for 5 marks). 2) Process of designing forms and reports.
JAD and Itis advantages. 2) Drawing DFDis Z Modeling logic [with decision tables of decision trees] 4) Data modeling VS, Process modeling, How do you use entity—relationship model for data modeling? UNIT-4 2) Normalization (Basic concept with example for 5 marks).
2) JAD and It's advantages. 2) Drawing DFDis Doubling logic [with decision tables of decision trees] 4) Data modeling vs. Process modeling. How do you use entity—relationship model for data modeling? UNIT-4 1) Normalization (Basic concept with example for 5 marks). 2) Process of designing forms and reports. 3) Pormatting forms and reports. UNIT-5
1) JAD and Itis advantages. 2) Drawing DFD's 2) Modeling logic [with decision tables of decision frees] 4) Data modeling vs. Rincess modeling, How do you use entity—relationship model for data modeling? UNIT-4 2) Normalization (Basic concept with example for 5 marks). 2) Process of designing forms and reports. 3) Pormatting forms and reports. UNIT-5 1) Installation and its types.
2) JAD and this advantages. 2) Drawing DFD's Modeling logic [with decision tables of decision frees] 4) Data modeling vs. Process modeling, the do you use entity—relationship model for data modeling? UNIT-4 2) Normalization (Basic concept with example for 5 marks). 2) Process of designing forms and reports 3) Pormatting forms and reports. UNIT-5 1) Installation and its types. 2) Documenting system
2) JAD and It's advantages. 2) Drawing DFDis Doubling logic [with decision tables of decision trees] 4) Data modeling vs. Process modeling. How do you use entity—relationship model for data modeling? UNIT-4 1) Normalization (Basic concept with example for 5 marks). 2) Process of designing forms and reports. 3) Pormatting forms and reports. UNIT-5
